DAFFODILS for Spring Flowers

No garden is complete without a liberal planting of Daffodils or Narcissus. Perfectly hardy, they grow and produce abundantly in almost any position, sun or shade, moist or dry. They are equally suited to pot-culture for winter flowering and are unsurpassed for naturalizing.

Our Daffodil bulbs are grown for us in Oregon, where climate and the skill of America's leading Daffodil specialist, Mr. Jan de Graaff, are combined to produce the very best.

Note. The trumpet, crown, or cup is the center of the flower; the perianth is the surrounding row of petals or wings. (EE) Extra Early; (E) Early; (M) Midseason; (L) Late.

In planting, the crown should never have more than 2 inches of soil over it. If planted too deep, Peonies will not bloom. The number following the name means the rating tabulated from the votes of the members of the American Peony Society throughout America and Canada. 10 is the highest possible score; none under 8 are offered.

SOIL CONDITIONER

SPECIAL MERLOAM FORMULATION

The greatest development in soil conditioning. When this highly active ingredient is applied to clay or silty soils, it binds the earth particles together to form small granules. The result is a crumb-like water-stable soil structure that will absorb and retain water far better than untreated soil. Monsanto's modified Vinyl Acetate Maleic Acid compound is the base of Merloam formulation of Krilium soil conditioner. 5 lbs. of Krilium will treat up to 600 sq. ft. depending on the depth of treatment desired.
